Information Systems student at BINUS University (GPA 3.92/4.00), concentrating in Business Intelligence, and Laboratory Assistant across eight computing courses including Data Structures, Database Technology, and Machine Learning. Designed the data model behind a family business's daily stock, consignment, and cash-flow operations, then modeled a second dataset into a star schema with measures built to stay correct under any combination of filters. Looking for a Data or BI Analyst internship to apply the same approach: start from a real business question, and build the model and measures that answer it correctly, not just once.

PROJECTS

CRIME ANALYTICS DASHBOARD — **Data Modelling Course Project**
Team of 5 · My Role: Data Model, Measures & Dashboard

- Modeled a simulated police case dataset as a star schema and wrote every metric as a measure inside the data model instead of a worksheet formula, so ratios like solve rate and arrest rate stay correct under any combination of active slicers.
- Built the dashboard: six KPI cards, ten charts, fourteen pivot tables, and four slicers (year, severity, category, province) that cross-filter every visual at once.
- Caught a labeling bug after the model was already built: a count of arrests per case was shown as a percentage-style "rate" with a capped progress bar, while the underlying measure had no ceiling at 100%. Relabeled it "Arrests per Case" and dropped the bar and percent sign, since the fix belonged to the label and chart type, not the formula.
- Dataset is simulated, generated by the group, so the work is presented on its modeling and measure design, not as a finding about real crime.

GROWTH VS WELFARE DASHBOARD — SMART DATA ANALYTICS 2026 — **Oct 2026**
Team Entry · My Role: Data Preparation & Dashboard — **Looker Studio**

- Combined six BPS tables and DJPK regional budget files into one province-by-year dataset (34 provinces, 2021-2025): standardized province names, reshaped wide budget files to long format, and merged the four provinces split from Papua in 2022 back into their parents so 34 provinces stay comparable.
- Reconciled total spending across two separate DJPK files (ratio 1.000 in four of five years, 1.012 in 2024 as the files cover 545 vs 536 governments), and wrote each ratio as a calculated field so it holds under any filter.
- Built the Looker Studio dashboard: four KPI cards, five charts, and year, region, and province filters, asking whether economic growth reaches poverty, inequality, and regional budgets.

NOTA — PRODUCT MATCHING MODULE — **Aug - Sep 2026**
Solo Developer — **nota.elbetellus.workers.dev**

- Built the data-cleaning stage of a pipeline that turns a photo of a handwritten sales note into structured transaction data: normalizing OCR-read product names and fuzzy-matching them against a real product catalog, falling back to a similarity score when nothing matches exactly.
- Measured accuracy per pipeline stage against a labeled test set instead of trusting one end-to-end number: 86.4% product-match, 100% quantity, 95.5% price accuracy across the 14 notes the pipeline processed end-to-end.
- Designed the confidence score to only move in one direction through the pipeline: a line the OCR itself was unsure about can never look more certain by the time it reaches a reviewer.

OMC STOCK & CASH FLOW APP — **Aug 2026 - Present**
Solo Developer — **omc-stok.elbetellus.workers.dev**

Source of the transaction data behind the project above: a production web app I designed for a frozen-food business's warehouse stock, consignment reporting, and cash flow, in daily use by the owner and warehouse admin. Data integrity is enforced at the database layer rather than the UI: stock quantities change only through transaction triggers, prices lock at the moment of sale, and access is backed by row-level security policies.

RESEARCH

FACTOR INFLUENCING TOURISTS INTENTION TO USE MOBILE AUGMENTED REALITY IN TOURISM — **2026**
First Author · RMIS Course Final Paper, supervised by Dr. Anderes Gui · IEEE format, 6 pages

- Tested an extended UTAUT2 model (with Personal Innovativeness and Aesthetic Experience) on what drives Indonesian tourists to use digital tourism apps. Collected 451 valid survey responses against 42 questionnaire items.
- Analyzed the data with PLS-SEM in SmartPLS 4: validated the measurement model (outer loadings, AVE, composite reliability, Fornell-Larcker), then bootstrapped 10,000 resamples. 13 of 17 hypotheses were supported.
- Habit was the strongest predictor of intention (t = 8.83). Effort Expectancy had no direct effect on intention but strongly drove Performance Expectancy (t = 15.81), pointing to an indirect adoption pathway.

WORK EXPERIENCE

BINUS UNIVERSITY — **Jakarta, Indonesia**
Laboratory Assistant — **Feb 2025 - Aug 2026**

- Taught and guided undergraduate lab sessions across eight courses: Data Structures, Algorithms and Programming, Database Technology, Computer Vision, Natural Language Processing, Computational Biology, Scientific Computing, and Machine Learning.
- Sustained a class pass rate above 60% and a training qualification score above 70% with a perfect attendance record, and regularly volunteered to cover sessions for other assistants.

- Noticed a student in a Data Structures lecture couldn't see the whiteboard from their seat, and re-taught Linked List operations one-on-one with hand-drawn diagrams on an iPad, walking through insert, delete, and search until the student could implement insert and search independently.
- Co-organized a voluntary quiz-prep session for Database Technology with a fellow lab assistant, drawing roughly 80% attendance despite only 50% being required, with strong quiz results afterward.

BINUS UNIVERSITY **Jakarta, Indonesia**
Freshmen Leader **Aug 2025**

- Led the new-student orientation program for approximately 400 incoming Information Systems students, managing meal logistics for the week and tracking attendance across all sessions.

BINUS UNIVERSITY **Jakarta, Indonesia**
Freshmen Partner **Sep 2025 - Jun 2026**

- Led the EESE sustainability program's tree-planting initiative, aligned with the UN SDGs.
- Ran weekly sessions for a peer group of seven students, covering campus orientation and helping troubleshoot academic difficulties through their first semesters.

EDUCATION

UNIVERSITAS BINA NUSANTARA (BINUS) **Jakarta, Indonesia**
Bachelor of Information Systems, GPA 3.92/4.00 **2024 - Present**

- **Concentration:** Business Intelligence
- **Relevant coursework:** Data Modelling, Data Visualization, Cloud Database, Data Warehousing

SMA XAVERIUS 1 JAMBI **Jambi, Indonesia**
Science Major **2021 - 2024**

AWARDS & ACHIEVEMENTS

Best Assistant, Odd Semester 2025/2026, BINUS University	2026
Semifinalist, B-Startion National Business Case Competition, BINUS	2026
Excellent Academic Achievement, Top 5% of Information Systems students, BINUS University	2025, 2026
Self-Paced Azure AI Basic Fundamental, Microsoft (elevAIte Indonesia)	2025
3rd Place, National Science Olympiad (OSN) City Level	2023
Finalist, National Science Olympiad (OSN) Provincial Level	2023
4th Place, PIX ONE City-Level Olympiad, SMA Xaverius	2023

SKILLS

- **Data & Analytics:** Excel (Power Query, Power Pivot, DAX), Power BI, Tableau, Looker Studio, SQL
- **Core:** Python, C, Java, JavaScript, TypeScript, HTML, CSS
- **Full-stack:** React, Tailwind CSS, Supabase, PostgreSQL, Cloudflare Workers
